
How to care for SILGRANIT sink

Daily care

- Moisten the sponge slightly with water and apply a small amount of neutral detergent to the soft side of the sponge and rub gently.
After scrubbing the entire surface, rinse off the detergent with water.
Wipe dry with a dry microfiber cloth to prevent limescale from remaining water.

Removal of chalk marks

- If left for a long time without wiping off the water, bleaching powder contained in the water may accumulate white.
In that case, it can be removed with a citric acid-based detergent.
After using a citric acid-based detergent, rinse thoroughly with water.
Finally, wipe dry with a dry microfiber cloth to remove any water marks.

Removal of metal powder

- When using a pot, metal may adhere to the surface of the sink.
In that case, put a little cooking oil on the sponge and rub it lightly.
Then use another sponge to clean it with detergent. and rub lightly.
Then wash off the detergent with water.
Finally, wipe dry with a dry microfiber cloth to remove any water marks.
